
Release Date: 24th November, 2025

New Features

- Added Device ID display in preparation for System Engineer Session Files feature.
- Added IP hardware hash filtering for enhanced network stability when being used on high traffic networks.

Improvements

- Enhanced network stability by automatically protecting against Ethernet packet storms that could cause the device to become unresponsive

Bug Fixes

- Fixed the issue where the Device ID would disappear from the front panel display after performing a factory reset
- Fixed display issue where dB values were incorrectly positioned in the middle of the screen
